OVERVIEW OF THE ROMTEC UTILITIES' SCOPE OF SUPPLY AND DESIGN SUBMITTAL

by Traci Bush

The Romtec Utilities Scope of Supply and Design Submittal (SSDS) is a comprehensive document that contains shop drawings, data sheets and details of the products and services supplied by Romtec Utilities. The SSDS is created specific to each pump station project for review and approval by the customer, site engineer and reviewing agency.

The SSDS plays a critical role in the design process. Before production of the pumping system begins, this document enables our customer to review our design and supply proposal and make comments and/or changes. The customer and consulting engineer can verify that the correct materials and components will be supplied for their project. This document is also typically reviewed by the reviewing agency to confirm that the proposed pumping system is in compliance with the construction documents and/or city standards.

The submittal process is very important, as it directly relates to the project schedule, the quality of the finished project and the overall success of the project. An "approved" submittal authorizes the pump station to be released for fabrication and shipment. This is a quality control measure to ensure that the correct pump station arrives at the project site.

For post-construction purposes, the SSDS serve as part of the as-built resources for pump station owners and operators.

For an example of a Romtec Utilities SSDS, go to the very bottom of this page and click on Scope of Supply and Design Submittal.
